DETAILED ACTION

Claims 1-3 and 5-9 are currently presented and have been examined.

Response to Arguments

Applicant's arguments with respect to claims 1-3 and 5-9 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 and 5-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 1-3 and 5-9 recite providing a monitoring result to an upper layer, above a transport layer, without the result being conveyed through the transport layer. This limitation is not described in the specification to enable one skilled in the art to make and/or use the invention without involving the transport layer. The specification describes the conventionally known "OSI" communication hierarchical model which "The nth layer of a communication terminal of such a system is configured so that communication is performed with the nth layer of a far-end terminal via a function provided from layer (n-1) of the terminal, and therefore an upper layer application can

operate as long as it can obtain information of one layer lower, and does not need to obtain information of two or more layers lower.” (see pages 1-2) This is conventionally known as “encapsulation”. However, the specification merely describes that “The gist of the present invention is that control related to a session between a media stream data transmission source and reception destination (also referred to as a media session) is performed based on information relating to communication conditions of a layer lower than the transport layer (for example, by conveying information relating to radio layer or network layer communication conditions directly to a layer higher than the transport layer without going via the transport layer).” (see page 4) This disclosure does not, in any specific detail, describe how the claimed invention is able perform any steps and/or functionality in order to allow the claimed invention to avoid the transport layer in the conventionally known manner without performing some sort of undue experimentation.

Therefore, these claims fail to meet the enablement requirement under 35 USC 112, 1st paragraph.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
